

Admin mints vote token
Admin sends token to vault
Admin provides a list of preregistered voters that belong to the organization
Registered voters/users claims tokens for voting
Admin creates a proposal
Admin sets constraints to proposal(e.g. yes/no/abstain)
Program checks if tokens are present in user's wallet
If present allows user to vote
Else, throw an error: Not eligible, contact admin
Users votes for their options using claimed token
Program tallies vote and displays result in sequential order
